Customer Information – Crane Breakdown in Åhus

Dear Customers,

Please be kindly informed that the port of Åhus faces severe operational problems due to the collapse of their crane last Friday. Consequently, container operations were stopped with immediate effect.

According to port information, it is planned to install a mobile crane. However, at present there is no replacement equipment available yet. Consequently, regular loading and discharging operations do not seem to be feasible within the next few weeks.

In cooperation with our local colleagues, we are currently considering all possible alternatives to cope with backlogged and future Åhus cargo. We will keep you posted about possible solutions as soon as possible.

We hope for your kind understanding and will revert in due time.
